

Zap PassWord Generator MANUAL

Zap PassWord Generator is made for your ease of use and security. To get started type a number such as 12 , you do not need to click anything yet , the number you type will be the amount of characters in the password

Good Luck

Next click on the upward arrow to increase the amount of passwords that are generated at once.

Next to the generated passwords you will see numbers , click on one of the numbers and it should turn green and some options should appear in the upper right hand corner of the program. Click one of these options to reset or copy individual passwords rather than all of them.

-To save your passwords to a .txt document click the save to file button. To copy all of the passwords to the clipboard click the copy button. Or you can reset all of the passwords by clicking the reset button.

-Under that is button that reads "open" click that and it will minimize all the extra options under it.

-The down arrow decreases the amount of passwords generated at a time.

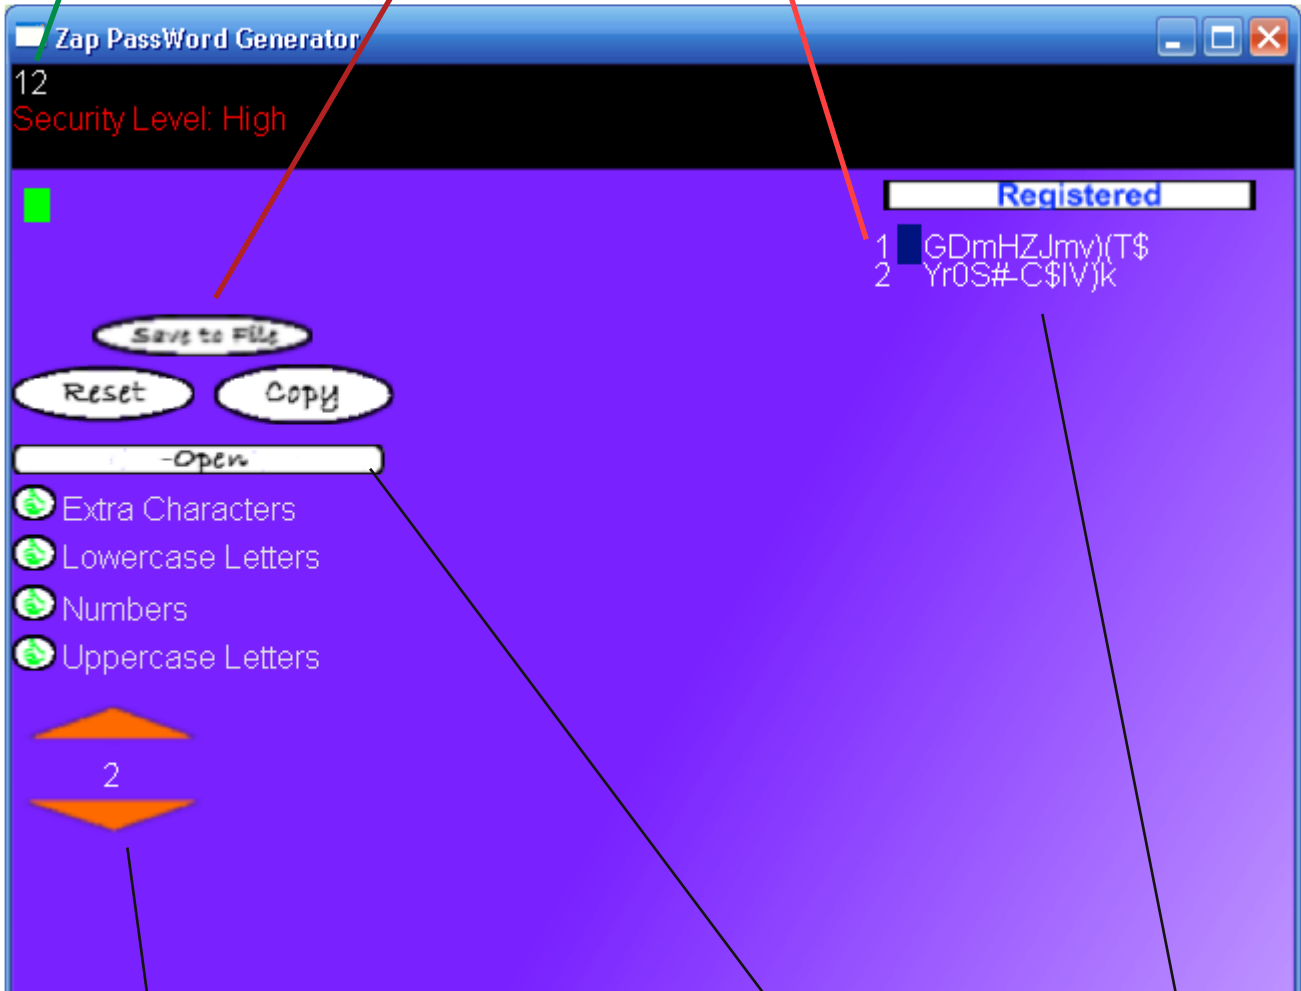

-You can also exclude/include different types of characters such as numbers , capital letters , and lowercase letters. You can also include extra characters which increases the strength of passwords by a lot.

On the following page there is a map of the different parts of the program

How long your passwords are

File and Password options

Individual password numbers , click on one to change only the selected password(s).

Your Passwords

Amount of passwords created at a time.
